Creating a copy of your Thunderbird profile for each computer.Q: VBA Overwriting header row of pdf using "Export" button from Publisher I have a header row of text that I need to append to my pdf files before exporting. I use the following code: Sub AppendTables() Dim ap As Application Set ap = ThisWorkbook.Application Dim rng As Range Set rng = ap.ActiveDocument.Tables(1).Range rng.InsertRowsBelow rng.Collapse Direction:=xlDown rng.Font.Size = 9 rng.InsertParagraphs End Sub The code works, but after running the macro, the header row that I have appended is not appended to the pdf files (using the "Export" button from Publisher). How do I make sure the header row is appended to the pdf before export? A: There are a few things that can be done to correct the issue: Use the method in the comments. Rename the sheet and workbook that is being processed in the VBA. There is a small amount of code that needs to be added to check the existence of the headers before appending them. The code will be adjusted by adding a check for the header to append only if it does not exist. Adjusting the code: Option Explicit Sub AppendTables() Dim ap As Application Dim wb As Workbook Set ap = ThisWorkbook.Application Set wb = ThisWorkbook If SheetExists("Sheet1") Then Dim rng As Range Set rng = ap.ActiveDocument.Tables(1).Range rng.InsertRowsBelow rng.Collapse Direction:=xlDown rng.Font.Size = 9 rng.InsertParagraphs If Not HeaderExists(wb, "Sheet1", "Header1") Then 'Add
